# MAGNETIC GRATES

General purpose grate magnets capture tramp metal and ferrous fragments from dry, free flowing materials conveyed by gravity. They provide a properly oriented, high density magnetic field which creates a complete magnetic net to trap contamination. Items such as nuts and bolts are held firmly in place to prevent costly damage to processing equipment. High strength rare earth grates are also available.

Available in plain style for feedstuffs, grain and foodstuffs which have a tendency to bridge; rod style baffles for freer flowing materials; angular style baffles for maximum magnetic protection in handling free flowing foodstuffs. Selection of the proper grate size should be based on a minimum of two times the outlet opening. Grain and feed applications may require three times the outlet size. Grates are also provided in round and drawer type.
