

OVERHEAD SEPARATORS

OVERHEAD CROSSBELT

These magnets are designed for high volume tramp iron removal and self-cleaning operation with less downtime. Another permanent magnetic solution from Magnetic Specialties, the only power required is to run the electric motor that turns the belt. Material is deposited to the side for easy removal. Concrete, wood chips, recycling facilities, and a wide range of end users can benefit from the superior quality of these crossbelts. **Very little maintenance costs involved versus comparable electro-magnets.**

STATIONARY OVERHEAD

The simplest solution to tramp iron removal. These magnets have **ZERO maintenance costs versus comparable electro-magnets.** Stationary Overheads are simply suspended above a belt or pulley and separate ferrous material from non-ferrous. Designed for a somewhat smaller volume than a Crossbelt, cleaning is manual.
